

016:Introducing SaSS

After-Class Assignment: Favourite Quotes

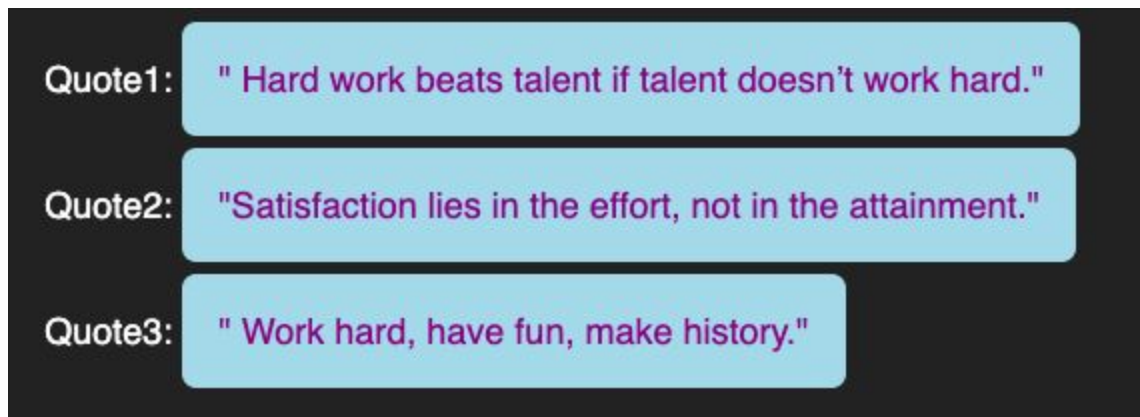

Introduction

In our last class we started with Sass. Let's put our knowledge into practice. Today you will be using your knowledge to create a Quotations page.

Description

1. Find 8 favourite quotes from the internet and arrange them on the page.
2. Show the quotes neatly arranged.
3. Use Sass to give styling.

Reference for an output example:

One is done for you to refer:-

HTML:-

```
<div class='favQuote1'>Quote1: </div>
<br><br>
```

CSS:-

1. Create variables for storing:-
2. width as 2;
3. favQ1 as " Hard work beats talent if talent doesn't work hard."
4. Font-stack as Helvetica, sans-serif
5. Back-color as lightblue;
6. Text-color as purple;
7. pix as 20px;

Use the above variable as follows:-

```
.favQuote1:after{  
  content:$favQ1;  
  background-color: $back-color;  
  padding:$pix;  
  border-radius:8px;  
  width:100vw/$width;  
  color:$text-color;  
}
```

Note: The :after selector inserts something after the content of each selected element(s). Use the content property to specify the content to insert.

Steps to follow

1. Click on [Project Link](#).
2. Login to your codepen account(if not logged in already).
3. Fork the code.
4. After you complete the coding, save it.
5. Then click on Share, copy the link and paste it into the Project Submission area.

Your creativity is your independence. Add any additional components of your choice but make sure you add all the required elements.
